## GHARTERQUETHONS

Q1. Convert to 12 hr clock 2023
0532
Q2. Round to 1 decimal place 0.657
Q3. How many minutes in a day
Q4. Find the time difference between 1629 and 2217

## earning

Revision:
Predict outcomes from data using the language of chance and likelihood.

## Probability. What are the chances of that?

Certain

Likely

50:50 Chance

Unlikely

Impossible

Something will definitely happen.

Something will probably happen, but it is not certain.

Something has exactly half a chance of happening.
Something is unlikely. It has more chance of not happening.

Something will never happen.

Probability is all to do with how likely, or unlikely events are to happen. Click on the words to see what they mean.

## Click on the statements to watch them being placed on the probability line

| It will snow in <br> May | 2012 is a leap <br> year | Year 5 will get <br> homework | It will rain in <br> April |
| :--- | :--- | :--- | :--- | | The sun rises |
| :--- |
| in the west |

## Probability Number Line

Rolling 7 on an ordinary 6 sided dice
Choosing one Year Group in a Junior School (Years 3 to 6)
$\square$ Rolling an odd number on a dice
$\square$ Choosing a red counter from a bag that has 6 red and 2 blue counters in it.
$\square$ Choosing any card other than an Ace from a pack of cards

## Probability Spinners

There is a $\frac{1}{4}$ ( $25 \%$ ) chance of the spinner landing on red.

There is a $\frac{1}{2}$ ( $50 \%$ ) chance of the spinner landing on blue.

There is a $\frac{1}{4}$ (25\%) chance of the spinner landing on green.

There is a $\frac{1}{4}$ chance ( $25 \%$ ) of the spinner landing on blue.

There is a $1 / 8$ chance (12.5\%) of the spinner landing on yellow.

There is a $1 / 8$ chance (12.5\%) of the spinner landing on red.

There is a $3 / 8$ (37.5\%) chance of the spinner landing on green.

There is a $1 / 8$ chance (12.5\%) of the spinner landing on purple.

Click on the colour to find out the probability of the spinner landing on it.

## Probability Number Cards.

Massimo has eight number cards in his hands. This is what he has:

## 14

2
7
2

What are the chances
of picking 2?
$\frac{1}{4}$ chance

What are the chances
of picking 1 or 3?
$\frac{1}{4}$ chance

## Reveal the Card

## click on the card to reveal what it is

$\checkmark$ There is a $\frac{1}{2}$ chance the number is odd
$\checkmark$ There is $1 / 10$ chance the card is 2
$\checkmark$ It is twice as likely to pick a 4 than a 2 .
$\checkmark$ There is $1 / 5$ chance of picking an 8.
$\checkmark$ There is a $7 / 10$ chance of picking a number 5 or more.

## SHARTER QUEHROK

1. Find the missing angle
2. 3 cans of juice cost £2.40. How much for 2 cans.
3. $78 \div 10$
4. Find 2 numbers that add to 20 and divide to give 1.

## earning

## Revision:

## Interpreting Bar Charts

Approximately, how many people watched Swansea?

How many more people watched Bristol City than Brighton?

## 2,800 approx

Which club had about 7,300 watching them?

Barnsley
How many people watch Torquay?

1,800 approx

## Data

## Data is information

Data handling is when we organise, display and try to understand information.

Some children wanted to find out about the length of songs. They wanted to know how long most songs were.

They listened to some songs and timed how long each one lasted

Here are their results:

- 3 min 20 seconds
- 2 min 58 seconds
- 3 min 12 seconds
- 1 min 59 seconds
- 4 min 03 seconds
- 2 min 15 seconds
- 3 min 32 seconds
- 3 min 37 seconds
- 3 min 58 seconds
- 1 min 45 seconds
- 3 min 0 seconds
- 3 min 13 seconds
- 2 min 35 seconds
- 3 min 17 seconds

# Not very easy to understand is it? 

Let's turn it into a graph...

## Graph showing how many songs there

## Every song is different...

So how can we find out what sort of length is most common?

## We can group the data

## We'll start by sorting it into a tally chart

- 3minizeseconds
- 2 mimfosecontus
- 3 min 12 seconds - 1 ninin 59 seconds.
- Aminiouseconds
- 2 min 15 -seconts
- 3 min 32 seconds
- 3 min 37 seconds
-3 min 58 -secontus
- 1 minin 45 seconds - Jmin 0 seeonds
- 3 min 13 -seconits
- 2min 35 secondo
- 3 minin 17seconds

1 min 30 sec to
1 min 59 sec

2 min 0 sec to
2 min 29 sec

2 min 30 sec to
2 min 59 sec

3 min 0 sec to
3 min 29 sec

3 min 30 sec to
3 min 59 sec

4 min 0 sec to
4 min 29 sec

## H

4 min 30 sec to
4 min 59 sec

## Remember how we tally in fives:

So how many does this tally show?

Right, let's get back to that tally chart...
... and change it into a frequency table

## Tally chart

## Frequency table

| Song length | Number of songs |
| :---: | :---: |
| 1 min 30 sec to 1 min 59 sec | $\\|$ |
| 2 min 0 sec to 2 min 29 sec | I |
| 2 min 30 sec to 2 min 59 sec | $\\|$ |
| 3 min 0 sec to 3 min 29 sec | HH |
| 3 min 30 sec to 3 min 59 sec | $\|\mid$ |
| $4 \min 0 \mathrm{sec}$ to 4 min 29 sec | \\| |
| 4 min 30 sec to 4 min 59 sec |  |

| Song length | Number of songs |
| :--- | :---: |
| 1 min 30 sec to |  |
| 1 min 59 sec |  |$\quad 2$

## Well, that bit was easy!

Now let's display the information in a pictogram

We're going to use one CD to stand for 2 songs, like this:

| Song length | Number of songs |
| :---: | :---: |
| 1 min 30 sec to 1 min 59 sec | $2$ |
| 2 min 0 sec to 2 min 29 sec | 1 |
| $2 \min 30 \mathrm{sec}$ to 2 min 59 sec | $2$ |
| 3 min 0 sec to 3 min 29 sec | 5 |
| $3 \min 30 \mathrm{sec}$ to 3 min 59 sec | $3$ |
| 4 min 0 sec to 4 min 29 sec | $1$ |

Now we can use those symbols to make a pictogram

Number of songs

Song length

## True or

 false? Most songs are between 3 and 4 minutes long.True

Song length

## Grouping data

When you group data, you have to make all the groups equal.

In this example, all the groups were 30 seconds long.

The same rule applies to any grouped data.
If we were grouping tables test scores, we could use:

$$
0-10,11-20,21-30,31-40 \text { and so on. }
$$

## SHARIERQUESHONS

Q1. Solve the equation below

$$
x+21=32
$$

Q2. Find all the missing angles

Q3. Find the average of the numbers below

$$
2,5,6,7,5,2,2,5,6,6,7,5,8
$$

Q4. Find
$30 \%$ of $£ 240$

## earning

Revision:
Plot information on a line graph. Interpret data using a line graph.

## Creating a Graph

Here is some information that will need a different type of graph

| Length of Time | Distance Travelled |
| :---: | :---: |
| $9: 00$ | 0 Miles |
| $9: 30$ | 8 Miles |
| $10: 00$ | 40 Miles |
| $10: 30$ | 55 Miles |
| $11: 00$ | 80 Miles |
| $11: 30$ | 82 Miles |

As this couple have two sets of numbers the best graph to draw is a line graph. This will help us to find out where we were at times like 10:45 too!
Go to the next slide to see the graph.

We timed the journey to our holiday destination. Here are our results:

## Creating a Graph

Here is some more information

| Length of Time | Temperature |
| :---: | :---: |
| Start Time | $85^{\circ}$ |
| 2 Minutes | $79^{\circ}$ |
| 4 Minutes | $75^{\circ}$ |
| 6 Minutes | $68^{\circ}$ |
| 8 Minutes | $65^{\circ}$ |
| 10 Minutes | $63^{\circ}$ |
| 12 Minutes | $60^{\circ}$ |

I timed how long it would take for the ice cubes to melt. Here are my results:

As this girl has two sets of numbers the best graph to draw is a line graph. This will help us read the temperature for the 'odd number' minutes too!
Go to the next slide to see the graph.

## Interpreting Graphs

Georgia measured the temperature outside for a day.

# Medal Maths Page 90: Line Graphs 

## תhTIERQUETHOK

Q1. Calculate

$$
540 \div 9
$$

Q2. Find all the missing angles

Q3. List the prime numbers between 50 and 60
Q4. Find
$15 \%$ of $£ 400$

## earning

Revision:
Interpret and compare pie charts.

## Pie Charts

A pie chart to show Year 's 6's favourite TV programmes
If 8 children liked Coronation Street, estimate how many children like Emmerdale?

How many children are in Year 6?

Estimate how many children like watching films.

## A Graph to Show 6T's favourite TV programmes

$\square$ Coronation Street

- Emmerdale
$\square$ Films
$\square$ Eastenders
$\square$ The Simpsons

# Questions Based on a Pie Chart: Favourite Subjects 

Which subject is the least popular?

16 children like P.E. How many children like D.T.?

How many children are in the class?

## Every Graph tells a Story

Months of the Year

## Every Graph tells a Story

Time
What do you think this graph is about?

## Every Graph tells a Story

## תHTILERQUETION

Q1. Which letter has half-turn symmetry

$$
A, C, H, P
$$

Q2. Find all the missing angles

Q1. Name 2 equilaterals that have all angles equal.
Q1. Find

$$
\frac{3}{5} \text { of } £ 200
$$

Learning Objective

## Revision:

Find the mean, median and mode from a set of numbers.

## Finding the Mean of a Set of Numbers

 $24 \div 6=4$The mean (average) of all these numbers is 4 .

Then we have to divide this total by however many numbers we had...

## Finding the Mean of a Set of Numbers

| Peter | 20 | 3 | 12 | 5 | 10 |  |  | $50 \div 5=10$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Jessica | 8 | 15 | 17 | 10 |  |  |  | $50 \div 4=12.5$ |
| Lucy | 2 | 8 | 9 | 50 | 3 | 6 |  | $78 \div 6=12$ |

As Jessica has the highest mean score, it could be said that she is the best darts player!

## Finding the Median of a Set of Numbers

This is the midway point.

The median of all these numbers is 4 .

The 'median' is the number in the middle. To calculate the median, first we have to put the numbers in order.

## Finding the Median

 Catherine picks eight number cards.

Halfway between 5 and 7 is 6

## Finding the Mode of a set of numbers

The 'mode' of a set of numbers means which number has come up the most. Have look at these numbers...

## Median, Mean and Mode

Look at these number cards. Can you calculate the mean, median and mode?

Number 7 comes up the most.

The halfway number is 5 .
The median is 5 .

## Mean, Median and Mode

## Heinemann 6: <br> Page 113, 114, 115.
